

Eldy 2.3 now available

Eldy 2.3 is now available.

Thank to the efforts of our developers and the contributions from Eldy.net, we finally released Eldy 2.3.

Languages and localization are growing in number and quality.

This happened thank to the **great cooperation of our volunteers** on the Eldy.Net “the community for the global e-inclusion that helped translate our software in many other languages and localize Eldy in many countries all over the world. Thank all Eldy.net for this great achievement.

Eldy 2.3 has some new beautiful features:

- **magnifier in browser**, to allow user to increase the font size so that websites are seen and printed in larger fonts
- **magnifier in email**, so that email user receives can be magnified on screen and printed larger. Email now works POP and **IMAP**
- a large list of bug fixed

We had put a lot of work into fixing **all cases on email**, so any inconvenience is now under control!

You can both **download latest Eldy** and install it, or **use the automatic update function** that is activated clicking the “click” button that appears now on your right bottom corner.
